

## Florida Economic Estimating Conference November 16, 2012

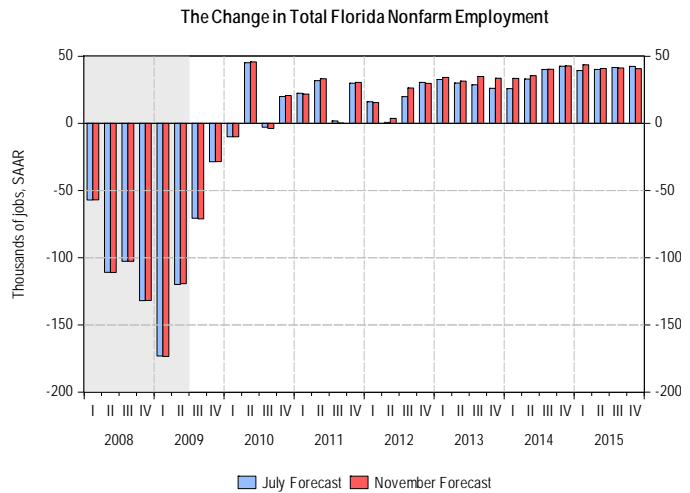

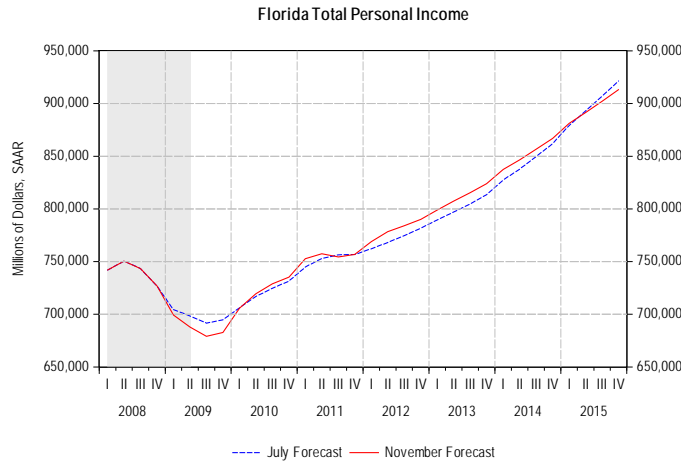

As expected, Florida's economy is improving. However, the strength of future growth will be largely contingent on the national economy's ability to deal with any adverse effects stemming from the fiscal cliff and the impact of the final resolution on Florida. In addition, any worsening of conditions in the Eurozone would be of potential concern. These threats held in abeyance, the November 2012 consensus forecast for Florida's economy reconfirms many of the previous expectations developed at the July 2012 conference.

Florida personal income grew at an average annual rate of 5.0 percent during the second quarter of 2012. This rate of growth is higher than the 3.1 percent estimate forecasted in July. Most of the increase in personal income is attributed to better than expected realizations in proprietors' and property income. For the current fiscal year, Florida personal income is expected to reach \$795.1 billion. This is \$9.4 billion more than the previous estimate, and represents a 4.0 percent increase over the prior fiscal year. On an ongoing basis, Florida personal income is expected to grow 4.5 percent during the 2013-14 fiscal year and 5.2 percent during the 2014-15 fiscal year.

The level of employment in Florida continues to improve from the low levels of the Great Recession. For the third quarter, total non-farm employment stood at 7,350 thousand jobs. This nearly matches the estimate of 7,341 thousand jobs established in July. It is expected that non-farm employment will add approximately 92 thousand jobs during the 2012-13 fiscal year. This will represent a 1.3 percent increase over the prior fiscal year. For the 2013-14 and 2014-15 fiscal years, employment growth is expected to be 1.8 percent and 2.1 percent respectively.

While it is coming from very low levels, the construction sector is performing modestly better than expected. Total private housing starts ended the third quarter at an annual rate of 65 thousand units. This was better than the July estimate of 58 thousand units. There will be continuing improvement in starts over the forecast, reaching annual rates of 87 thousand units in fiscal year 2013-14 and 113 thousand units in fiscal year 2014-15. The peak year for starts was 2005-06 at nearly 272 thousand units.

Finally, vehicle registrations and tourist visits continue to contribute positively to Florida's economic recovery. The November forecast of total light vehicle registrations makes adjustment for actual third quarter data, and maintains characteristics of the July forecast. As for total visitors, new estimates show a stronger than anticipated increase in the number of visits to Florida; however, some adjustment has been made to account for weaker than expected tourist visits from abroad.
