

NATIONAL ECONOMIC ESTIMATING CONFERENCE

October 8, 2007

U.S. Economy

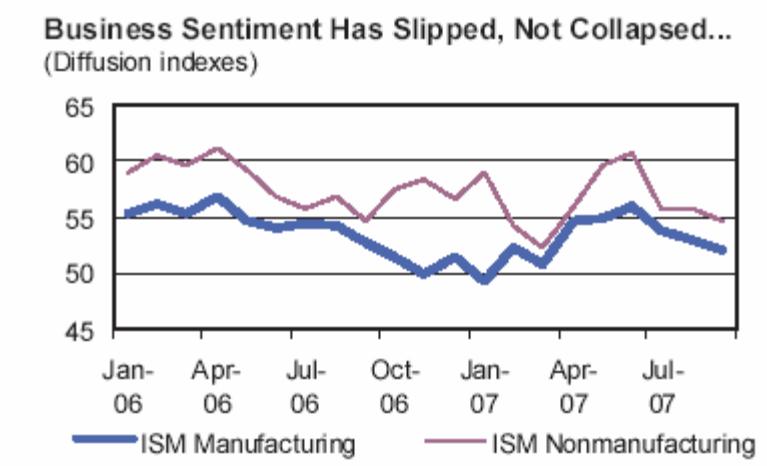

Since the National Economic Estimating Conference held in July, the housing outlook has further dimmed – continuing its spillover into consumer spending. Data from Global Insight typically forms the basis of the forecast adopted by the Conference. According to them:

- GDP growth will slip to just 1.5% over the next three quarters, pulled down by the next leg in the housing downturn. GDP will not regain the strength of its 2005-06 growth rate during the forecast horizon.
- The housing downturn has much further to go, and a slowdown in consumer spending growth is under way.
- Houses are starting to flood the market because of the deterioration in the subprime mortgage market, which has led to rising foreclosures, defaults, and homeowners selling their homes to avoid default. Particularly worrisome, the tightening conditions in the mortgage market are not limited to the subprime sector.
- One especially troubling area is the growing inventory of new and existing single-family homes. In August, the supply of unsold new homes was 8.2 months. But an even grimmer statistic was the inventory for existing single-family homes – 9.8 months, its highest reading since February 1988. Moreover, the Census Bureau's homeowner vacancy rate, which measures units that are vacant and for sale, jumped to 2.8% at the end of the first quarter, its highest reading in its 51 year history.
- Finally, nearly every recent housing indicator was down (starts, new and existing home sales, nominal housing prices, residential investment, etc.). Many of these indicators are falling faster than the previous forecast anticipated, and homebuilder sentiment is at its all-time low.

The fact that the housing market correction has further to go (at least through mid-2008) is also driving many of the other downward adjustments to the economic forecast. A significant part of these relate to the negative wealth effects associated with declining home values. Consumer spending on items such as vehicles has been reduced. Spending is also being hampered by lower overall employment growth, rising consumer debt, and by higher energy prices. Overall debt burdens and financial obligations continue at near record highs.

As consumers begin to watch their pennies, businesses will grow wary as well. Not surprisingly, business sentiment has dropped over the late summer months, and business spending remains below historical standards as the growth of corporate profits begins to slow.

Graph produced by Global Insight

Finally, while a national recession clearly remains a risk, it is still not the most likely outcome. The more than fifty leading business analysts' forecasts used for the publication *Blue Chip Economic Indicators* now place the consensus probability at around one-in-three – up from one-in-four odds in August. The average of the top 10 was 46.1%.
