

National Economic Estimating Conference

February 24, 2021

The National Economic Estimating Conference met on February 24, 2021, and adopted the control forecast. For the first time since the onset of the pandemic, it contained relatively balanced upside and downside risks to the projected outcomes actually coming to pass. The near-term outlook continues to show a path that is dramatically weaker than the forecasts made a year ago, while the long-term outlook regains the pre-pandemic trend. This pattern directly results from the Coronavirus outbreak, the actions to contain it, and the pandemic-induced economic contraction that followed.

The World Health Organization (WHO) reported the first Coronavirus case in China on December 31, 2019. From there, the virus spread quickly around the globe. The Centers for Disease Control and Prevention reported the first human-to-human transmission in the United States on January 30, 2020, and characterized COVID-19 as a pandemic on March 11, 2020. Various government emergency measures and stay-at-home orders to slow the spread, as well as voluntary “social distancing” actions, precipitated a severe collapse in demand (a demand shock), while substantial supply-chain disruptions related to interrupted or nonexistent means of transport, factory closures and production slowdowns produced a supply shock. In June 2020, the National Bureau of Economic Research (NBER) announced February 2020 as the peak in the current business cycle, marking the end of the longest US economic expansion on record and putting the US economy in recession territory. According to NBER, “...the unprecedented magnitude of the decline in employment and production, and its broad reach across the entire economy, warrants the designation of this episode as a recession, even if it turns out to be briefer than earlier contractions.” IHS Markit believes that the trough of the initial recessionary response was reached in April, thus potentially ending the shortest and deepest recession in US history.

Economic activity has rebounded from its April depths, but it continues to be constrained by successive waves of infection and the efforts to contain them. IHS Markit’s projected recovery trajectory is shaped by the expected widespread distribution of Coronavirus vaccines; the Conference places this milestone at the end of the State’s 2020-21 fiscal year. In the IHS Markit baseline model, the GDP level has improved more rapidly than IHS anticipated in the fall, but regaining the pre-pandemic levels still takes many years. In terms of growth rates, the recovery in GDP resembles a radical or square root sign—meaning a deep contraction followed by a quick upturn and then a plateau. The forecast adopted by the Conference follows this pattern.

In March 2020, Congress passed three major pieces of legislation that directly supported the national economy and individual states. A fourth measure passed in April 2020. Their collective impact was a part of the forecast adopted in November 2020:

- The Coronavirus Preparedness and Response Supplemental Appropriations Act; Phase 1. This legislation provided \$8.3 billion in emergency funding for federal agencies to respond to the Coronavirus outbreak. [Public Law No: 116-123; enacted 03/06/2020] Florida benefitted from some of this funding for crisis response.
- The Families First Coronavirus Response Act; Phase 2. This legislation responded to the COVID-19 outbreak by providing paid sick leave, tax credits, and free COVID-19 testing; expanding food assistance and unemployment benefits; and increasing Medicaid funding. [Public Law No: 116-127; enacted 03/18/2020] Florida benefitted financially from the temporary 6.2 percentage-point increase in FMAP (the federal government increased its matching rate, resulting in a lesser need for General Revenue).
- The Coronavirus Aid, Relief, and Economic Security [CARES] Act; Phase 3. This legislation provided substantial federal government support (\$2.2 trillion, the largest economic stimulus package in U.S. history) to individuals, businesses, hospitals, and specific industries dealing with the COVID-19 pandemic and its associated economic

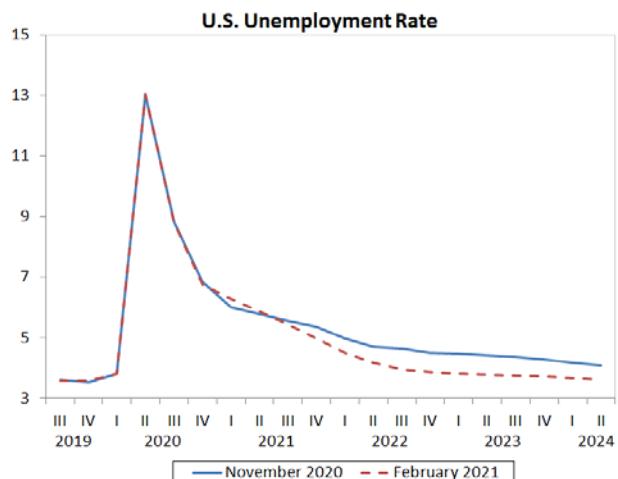

consequences. [Public Law No: 116-136; enacted 03/27/2020] This bill provided the greatest direct budgetary relief to Florida.

- A fourth stimulus bill became law in April 2020. Referred to as an interim spending bill, it provided an additional \$484 billion for small businesses, hospitals and testing. [Public Law No: 116-139; enacted 04/24/2020]

Subsequent to the November conference, nearly \$3 trillion from two additional federal measures have colored the new outlook adopted in February. The first one had already passed, and the second was anticipated:

- In late December, a fifth relief bill passed as part of the Omnibus Appropriations package. This legislation provided \$900 billion in new and redirected spending. The package included an extension of certain unemployment insurance programs through mid-March (followed by a one month phase-out); an enhanced benefit of \$300 per week through the phase-out; \$600 checks for qualified Americans; \$284 billion for the Payroll Protection Program; \$125 billion to states for COVID-19 mitigation, educational institutions, and transit authorities; and relief for entertainment venues, renters, and the airline industry. [Public Law No: 116-260; enacted 12/27/2020]
- The American Rescue Plan was signed into law on March 11, 2021, to speed up the United States' recovery from the economic and health effects of the ongoing pandemic. First proposed on January 14, 2021, the \$1.9 trillion package built upon many of the measures in the CARES Act from March 2020 and in the Consolidated Appropriations Act of 2021 adopted in December. It includes stimulus checks of \$1,400 per qualifying person; extension of emergency unemployment programs through early September, with an enhanced unemployment benefit of \$300 per week; \$350 billion of unrestricted aid to state and local governments; \$287 billion of support for education; \$194 billion in expanded tax credits and healthcare subsidies; \$125 billion for COVID-19 mitigation efforts; \$96 billion for transportation and infrastructure; \$16 billion for agriculture and nutrition programs; \$17 billion for veterans' benefits; and aid for renters and entertainment venues. [Public Law No: 117-2; enacted 03/11/2021] The National Conference of State Legislatures (NCSL) and Federal Funds Information for States (FFIS) project that the State of Florida will receive at least \$10.232 billion in new relief and \$0.364 billion for capital projects.

The adopted forecast incorporates key elements of the new federal measures described above as part of the firewall that checks the economic cratering that would otherwise occur. As a result, while many of the key economic variables continue to be negatively affected by the pandemic, they have been upgraded since November 2020. Relative to that forecast, the February forecast has higher growth rates in the 2020-21 fiscal year for real GDP, housing starts, personal income, consumer spending, gross private domestic investment and corporate profits; however, this good news comes with a caveat. Even though many of the major indicators have shown a technical bounce back in growth rates in FY 2020-21, many also have lower levels than expected pre-pandemic and still others are artificially supported. As an example, housing starts have been boosted by the record low interest rates induced by the Federal Reserve's actions to institute rate cuts to near-zero percent. Similarly, personal income has been inflated by the massive infusion of federal transfer payments since the pandemic began.

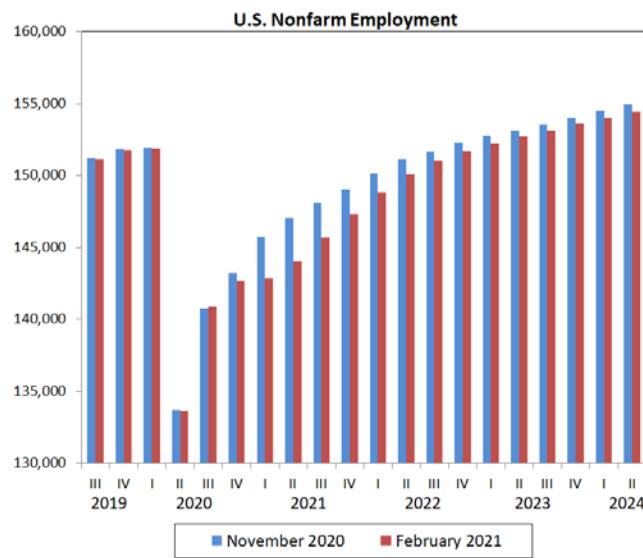

Following a 5.0% decline in the first quarter of 2020, real GDP dived by 31.4% in the second quarter as the US economy shut down to limit the spread of coronavirus. In breathtaking speed, GDP regained a record 33.4% in the third quarter of 2020. Real GDP increased another 4% on an annualized basis in the fourth quarter of 2020, solidifying the path to recovery despite the still ongoing pandemic. The new forecast expects GDP to regain its previous peak in the second quarter of 2021, three quarters earlier than expected in the previous forecast. For the full 2020-21 fiscal year, GDP is expected to grow a modest 1.3%. After accelerating to 5.6% growth in FY 2021-22, real GDP surpasses its pre-pandemic forecasted level in FY 2022-23. It grows between 2.1% and 2.6% annually through the remainder of the forecast.

The unemployment rate reached a cycle high of 13.0% in the final quarter of FY 2019-20. Moving forward, the rate gradually drops to 3.5% for FY 2024-25 before reverting to full-employment levels of around 4% by FY 2027-28, as those affected by the recession slowly return to jobs, find new jobs, or retire early. In the face of cautious consumers in the near term, businesses will remain reluctant to hire and invest. While some jobs were destroyed quickly and permanently, the creation of alternative opportunities in an economy adjusting to new health risks will take time. The rate of job loss reached 40% in the second quarter of 2020 from the first quarter of 2020 on an annualized basis and only half of the lost jobs had returned by the fourth quarter of 2020. Employment declines by 3.0% in FY 2020-21, rebounds by 3.8% in FY 2021-22, and slowly settles back to growth rates similar to pre-pandemic rates for the rest of the forecast horizon. The US economy has fewer jobs than expected pre-pandemic for each year in the forecast as some jobs never return to the pre-pandemic expected levels.

Personal income grew by 35.8% at an annual rate in the second quarter of 2020, with declines in wages entirely swamped by soaring transfer payments and other income components due to federal enhanced and expanded unemployment benefits, stimulus checks to individuals, and support to business incomes. Income then declined by 10.2% in the third quarter and by 6.7% in the fourth quarter of 2020 on an annualized basis. Personal income is expected to climb sharply by 22.6% and 18.5% in the last two quarters of FY 2020-21 reflecting a continuation of similar income support measures from President Trump's last stimulus package and President Biden's first to end FY 2020-21 with 6.3% growth over the prior year. As a result, personal income levels top pre-pandemic expectations in the current fiscal year but are expected to recede below pre-pandemic levels for the remainder of the forecast, albeit growing at pre-pandemic rates.

Similarly, real disposable income soared by 48.6% in the second quarter of 2020 from the prior quarter on an annualized basis, but dropped by 16.3% and by 9.5% in the third and fourth quarters of 2020 respectively. Personal income swings to +22.1% and +18.4% in the last two quarters of FY 2020-21, resulting in an expected 5.2% jump over the year. After dropping below the pre-pandemic level in FY 2021-22, disposable income stays subpar until finally eking back above the pre-pandemic level in FY 2026-27. With personal income outstripping outlays under lock-downs, the personal saving rate increased to a projected 26.0% in the second quarter of 2020 before leveling back to 13.4% in the fourth quarter. The rate is expected to swing back up to 19.0% in the last quarter of FY 2020-21. Households finally reduce savings to pre-pandemic levels by FY 2022-23.

Consumer spending plunged by 33.2% in the second quarter of 2020 over the prior quarter on an annualized basis, leading to an overall drop of 1.3% in FY 2019-20. Spending then rebounded by 41.0% in the third quarter of 2020 and with another 2.5% in the fourth quarter. Taken together with the expected spike of 7.5% and another 3.6% in the last two quarters, FY 2020-21 is expected to grow by 1.7%. Even though consumer spending grows at faster than pre-pandemic rates starting in FY 2021-22, it does not return to the forecasted pre-pandemic levels until FY 2024-25.

The national housing market has shown remarkable resiliency in the face of the pandemic, as construction was generally deemed “essential” by governments and people less affected by the job market travails demonstrated a willingness to undertake major financial investments. A 72.1% contraction to just over one million housing starts occurred in the second quarter of 2020, but then starts shot back to the levels seen immediately prior to the pandemic by the fourth quarter of 2020. Both starts and existing home sales were boosted by the record-low mortgage rates in the near term.

The outlook for corporate profits has further improved since November but—barring the current fiscal year—remains bleak relative to the December 2019 forecast. Book profits are expected to grow by 10.3% in FY 2020-21, briefly exceeding pre-pandemic levels, but this strength is immediately followed by a year of outright decline. Profits then grow at depressed rates in most fiscal years relative to pre-pandemic rates, causing the profit levels to stay below pre-pandemic levels throughout the remainder of the forecast. Economic corporate profits follow a similar path.

Finally, the price of Brent crude oil plunged to \$29.4/barrel in the second quarter of 2020 as the global recession and price war between Saudi Arabia and Russia combined to create an unprecedented surplus of oil. As global growth rebounds and the OPEC+ countries continue seeing success in restricting production, the price expected to rise to \$59.1 in FY 2021-22—above the \$50/barrel level at which US drilling and production stabilize.
